Abstract Background and Purpose – Patients who smoke and those who are of low socio-economic status show a higher incidence of mental ill health in developed countries. The aim of this study is to find out whether this is true for dentally treated patients in Sweden. Methods – The study is a large-scale, cross-sectional, population-based survey of 8666 dentally treated patients in Sweden. Patient data were collected at baseline (interview) and subsequently at follow-up (two years later, interview), from the 570a42141b
