I guess it's the result of either unzipping your.mp4 file or something which makes mp4 files think that the name 4.15 is a period. You can rename your file back to.zip and unzip it. Then rename it to 4.15.mp4. Also, it should be noted that the name 4.15 is the name of the movie, not the sound recording from the movie. X-ray exposure is a big problem for patients during CT examinations (computed tomography). The radiation can cause mutations in the DNA of certain organs, such as the pancreas, colon and bone marrow (CT exposure). More importantly, the cumulative radiation exposure over the course of the patient's life could lead to a risk of cancer. These issues have become more important for patients who require CT examinations on a regular basis, and the radiation exposure is increasing. To take full advantage of the benefits of CT examinations and obtain reliable results, imaging systems must meet the requirements for exposure to low radiation. "To reduce patient radiation exposure during CT, we developed a novel x-ray tube, whose radiation field is significantly reduced. It lowers the dose in a region in front of the x-ray tube, which is more critical to the radiation exposure, and expands the imaging field, which reduces the radiation exposure further", said Hideya Kojima, MD, PhD, of Asahikawa Medical University. To detect the amount of radiation during a CT examination, the researchers placed a sensor in the form of a cup on the patient's body. The sensor was placed at a distance from the area of interest, and it indicated the X-ray dose in that area. They found that the dose level in the crucial area of exposure was reduced by at least 50 percent. In addition, the scan field was increased, and the radiation exposure level in the CT user's body was lowered. "This sensor technology can be applied to other parts of the body in the next step", Dr. Kojima said.
